Curriculum Vitae

Sander Vleugels
Senior Web Developer

> " The better that you understand what you want, what you try to achieve on the internet, where you want to go with your project; the better I can build a web system that can support you now and in the future. As a bonus, I'll help you to figure out all of the above. "

Skills

- Backend Development
- Analysis
- Drupal Applications
- Website Development
- Information Architecture

Languages

- Dutch - mother tongue
- English - very good
- French - intermediate

Software & technologies

- Git
- MySQL
- Drupal

	2dotstwice
	Developing Drupal CMS systems and AngularJS frontend experiences
	Building API services with Symfony and Silex

2011 - 2014	**Drupal developer**
	Statik
	Developing Building Drupal CMS systems
	Information architecture
	Large scale content migrations

2009 - 2011	**Drupal developer**
	Desk02
	Developing Building Drupal CMS systems

Project Selection

De FSMA - Information Architect - Senior Drupal Developer (2020)

Information analysis for the migration of an existing website to a new Drupal platform. Making sure that all the legacy information can be migrated, while also making improvements and additions to the information architecture.

Stad Leuven - Senior Drupal Developer (2020)

Support, continued development and expansion of a multi site Drupal setup with shared functionality. Allowing the customer to rapidly add new websites in a well known environment.

Vlaams ziekenhuisnetwerk KULeuven - Senior Lead Drupal Developer / Information Architect (2019 - 2020)

An intranet that supports 32 Flemish hospitals in the development of a sustainable knowledge network for the joint optimization of care quality and the quality of business operations. The project required large content and user migrations and the possibility to allocate fine grained permissions based on group, hospital and user relations.

FRIS Onderzoeksportaal - Senior Drupal Developer (2019 - 2020)

This project contains information about all the scientific research that has been done in Flemish research institutes. And that's a lot. Every night all the information is synced, processed and indexed to provide a fast search interface.

Live The Connection - Senior Lead Drupal Developer / Information Architect (2016 - 2019)

Live The Connection provides training to teach people to manage stress and the response they have to it. Courses can be followed live or online and need to be followed in a predefined order. This project ranged from analysis of (business) needs, figuring out which functionality was needed first, always taking into account progressive insight; to developing and coordinating the team.

Zorgkwaliteit - Senior Drupal Developer (2017)

The zorgkwaliteit website allows users to investigate and compare facets about the hospitals in Flanders. The numerical and statistical data is provided by a scientific team and imported into the website. The website is a combination of Drupal with an Angular layer on top.
